

TF/SMS-4 Cellular Remote Alarm & Control for MixRite TF Dosing Pump

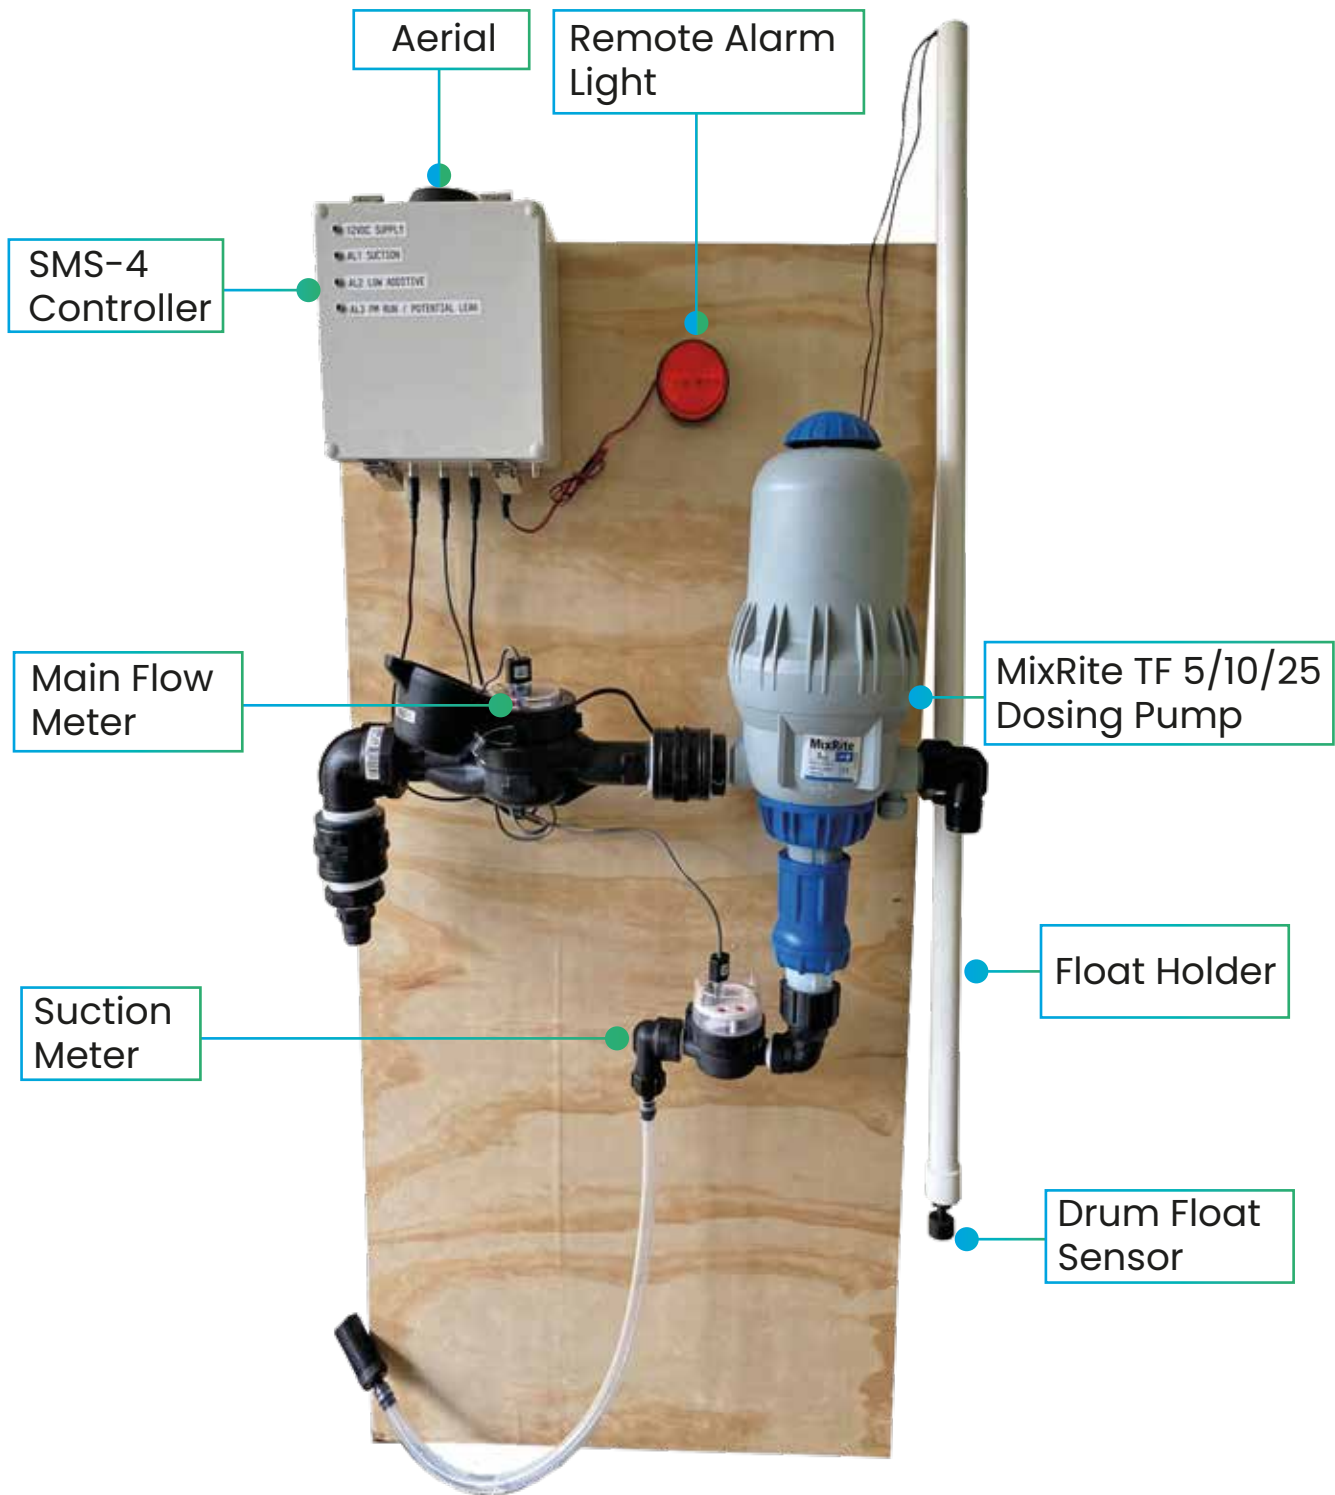

The system will send a simple text alert to up to 12 phones, and generate an alarm light on the controller for the following events:

1. Pump is running (or should be) but no suction of minerals is detected
 2. Drum or minerals tank is almost empty
 3. Pump is running when it shouldn't be (possible leak)
- By sending "usage" text to the system you receive a flow-rate message for both pump and suction.
 - A remote flashing-light alarm is also provided.
 - 12 VDC output is available to shut the water pump when night time leak is detected.
